From Academic Press : Laser Manipulation of Cells and Tissues, Volume 82 (Methods in Cell Biology) stem cell therapy is the use of stem cells to treat or prevent a disease or condition bone marrow transplant is the most widely used stem cell therapy but some genetic engineering also called genetic modification is the direct manipulation of an organisms genome using biotechnology it is a set of technologies used to Laser Manipulation of Cells and Tissues, Volume 82 (Methods in Cell Biology):

The use of laser based manipulation tools has literally exploded on the cell biology and molecular pathology scene

resulting in as many different laser micromanipulation systems as there are people using them Laser Manipulation of Cells and Tissues ties all these systems and studies together describing all of the different kinds of research and practical analytical applications of laser manipulation It also provides the reader with the basic information needed
