By Markolf H. Niemz : Laser-Tissue Interactions: Fundamentals and Applications (Biological and Medical Physics, Biomedical Engineering) beng 87 freshman seminar 1 the freshman seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty apam 1601 introduction to computational mathematics and physics 3 points lect 3 introduction to computational methods in applied mathematics and physics Laser-Tissue Interactions: Fundamentals and Applications (Biological and Medical Physics, Biomedical Engineering):

3 of 3 review helpful Concise and Practical By A Customer This book provides a concise review of laser tissue interaction It begins by introducing a brief theoretical foundation in tissue optics and moves on to describing various interaction and ablation mechanisms The chapters are very well organized the materials are well presented and equations are used only when necessary A large chapter is dedicated to introducing Medical practitioners scientists and graduate students alike will find this exhaustive survey a vital learning tool It provides a thorough description of the fundamentals and applications in the field of laser tissue interactions Basic concepts such as the optical and thermal properties of tissue the various types of tissue ablation and optical breakdown and its related effects are treated in detail The author pays special attention to mathematical tools Monte From the reviews the author has provided a comprehensive background with examples describing the basics of laser tissue interaction an extremely useful reference companion Lasers in Surgery and Medicine From the reviews of the third edi
