From Springer : Optical-Thermal Response of Laser-Irradiated Tissue photo thermal therapy ptt is a minimally invasive therapy in which photon energy is converted into heat to kill cancer gold nanoparticles absorb light strongly and the enchantment of au nps since ancient times as reflected in their intense color originates from the basic photophysical response that does not exist to Optical-Thermal Response of Laser-Irradiated Tissue:

The second edition maintains the standard of excellence established in the first edition while adjusting the content to reflect changes in tissue optics and medical applications since 1995 The material concerning light propagation now contains new chapters devoted to electromagnetic theory for coherent light The material concerning thermal laser tissue interactions contains a new chapter on pulse ablation of tissue The medical applications section now includes se From the Back Cover The second edition of Optical Thermal Response of Laser Irradiated Tissue maintains the standard of excellence established in the first edition while adjusting the content to reflect changes in tissue optics and medical applicati
